

Individually manufactured to suit your location and requirements

- Concrete Pontoons
- Boat Lifts
- Jet Ski Docks
- Aluminium Pontoons
- Cable Pontoons
- Maintenance
- Dryberth Pontoons
- Piled Pontoons
- Strut Pontoons

The Aqua concrete series pontoon is a more heavy weight piled pontoon system that can be installed in all situations from the quietest canal to main river with heavy boat traffic. The concrete top version has an optional "Dry Berth" which allows a vessel up to 2 Tonne to be moored on top of the pontoon (size & weight conditions apply). The dry berth pontoon has a cut out or scollop at one end to make an easier ascent onto the pontoon.

Constructed with the highest grade materials starting from the concrete deck right through to the floatation system.

- Custom made concrete deck
- Average 125mm thick concrete deck
- Optional round or squared corners (no charge)
- polystyrene void wrapped in HDPE liner
- Complete parameter beams for extra strength (average 200mm [H] x 150mm [W] )
- First grade marine carpet (Colour optional)
- Mooring cleats fixings are cast into the concrete deck (exceeding engineering requirements)
- Independent engineer guarantee
- Council approvals
- CAD drawings provided prior to council submission for approval by client
- Designed and built to Australian standards
- Wide range of accessories available
- Ideal for canals or main river with heavy duty pile brackets.
- 3 year warranty

Most models come with your choice of marine carpet colour and all pontoons come with a high density foamed filled fender.
